Introduction

What is planned?

This conference will demonstrate examples of practice-based applied research; highlighting effective partnership between practitioners and experienced researchers. We will illustrate how this approach can have a powerful impact on practice excellence and professional development.

Evidence Based Practice – Integrating research in routine practice

Day One – Thursday 20/09/18, 9:00 am - 5:30 pm

Our exciting program includes keynote talks from world-leading researchers from across nursing, midwifery and health sciences. There will also be a wide range of invited papers to present collaborative research between academics and practitioners as well as poster presentations from all the healthcare discipline groups to demonstrate the connection of strong practice-based research and service delivery.

Day Two – Friday 21/09/18, 9:00 am - 4:00 pm

Day Two will include interactive workshops. There will be a selection of five parallel interactive workshops to provide the opportunity to share experiences and learning with international colleagues. There will be further invited paper presentations across nursing, midwifery and allied sciences, with a powerful closing session to focus on the future key contribution of best-practice research for service user and health service delivery.
